PROFESSIONAL ADVERTISING PARASOLS

With over 25 years' experience in providing custom sun protection products, Suman Ltd. is the company you can rely on. Ever since our beginnings in 1990, we have been investing in knowledge and innovation, to meet our customers' unique needs and demands for quality.

Our main office and production plants are located in Gracanica, Bosnia and Herzegovina, and we also sell our products via representative offices in Sarajevo and Zagreb, Croatia.

Our mission is to provide high-quality sun protection products at affordable prices using innovative technologies. The passion for parasols is our driving force, resulting in easy to handle and easy to maintain products. Our commitment to quality and design makes us a qualified partner to satisfy your sun protection and advertising needs.

We are an ISO 9001:2015 certified company, which testifies to the continuous improvement of the effectiveness of our processes in order to enhance customer satisfaction.

From your first contact with our sales team, we will ensure that your expectations are met and exceeded.

We are an export-oriented company, with 75% of our products exported. The satisfied customers in Western Europe and worldwide can testify that we meet the most demanding quality standards. Motivated by our customers' satisfaction, we retain our place as an indispensable partner offering sun protection products.

Whether you are building brand awareness by advertising with parasols in pubs, restaurants, hotels or cafes, we are the partner you can count on. Particular attention for an easy maintenance and the availability of spare parts is guaranteed over time. Your complete peace of mind will be provided, with the full after-sales service and the guarantee that all our products are 100% authentic quality goods, produced in Europe and meeting all the European quality standards. When ordering from us, you can be sure you are dealing with skilled individuals who share a passion for parasols at each stage of the process.

PRODUCTS MADE IN EUROPE

Productivity and price used to be crucial for a company's success. However, modern companies must possess the ability to provide innovation, authenticity and flexibility in volatile markets and when challenged by unique customer needs. As a **TÜV ISO 9001:2015 certified** company, we are capable of meeting such requirements, with a systematic quality management system and a continuous improvement of the effectiveness of our processes. 80% of the materials used in our production are of European origin, which ensures that the highest European quality standards are met.

Our team of young, enthusiastic and creative employees are at your service, excited to fulfil your individual needs, as challenging as they may be.

ENVIRONMENTALLY FRIENDLY PRODUCTS

By providing durable and sturdy parasol frames and offering the possibility of fabric replacement, we encourage you to make the best of our products, simultaneously decreasing your expenses, reducing waste and protecting the environment.

Keep our parasol frames longer and simply replace the fabric. Thanks to our user-friendly design, replacing a fabric will take a mere couple of minutes. Moreover, the dyes we use meet the highest European standards of health and environment protection, supporting your social responsibility goals.

The dyes follow the **Directive 2002/61/EC of the European Parliament** on the use of dangerous substances, which ensures quality of life, health protection and consumer safety of end users.

QUALITY FEATURES

All of our parasols frames are made from highest quality aluminium and high-tech plastics engineered for reliability and durability.

The frames are treated with a powder coating that makes them resistant to corrosion and other signs of wear. For more elegant designs, opt for our aluminium wood look frames.

Our fabrics are made of 160-300 g/m² 100% polyester fabric. For our large parasols, we also provide a range of acrylic fabrics. Along with the unicolor fabric, they can be dyed in a wide range of colours to suit your advertising needs.

Our fabrics are highly durable, resistant to moisture, water-repellent and waterproof. The dyes we use in printing are produced in Europe and they provide the highest UV protection for end users and fastness to light.

The click system of parasol repair that our engineers have carefully designed, at the same time thinking about possible service of parasols, allows you to easily repair parasol on-site.

Special frame reinforcement is fiberglass poles on roof structure instead of standard aluminium, which provide stronger frame and breaking resistance.

PRINTING PROCESS

We use two different printing methods, pursuing the technique that best enhances your artwork. We deliver every possible colour option from the Pantone colour scale. There is no need to compromise with the existing colours of your logos/designs. Our pre-treatment of fabrics including optical brightening ensures that a high colours yield is achieved, and the colours are created individually for you.

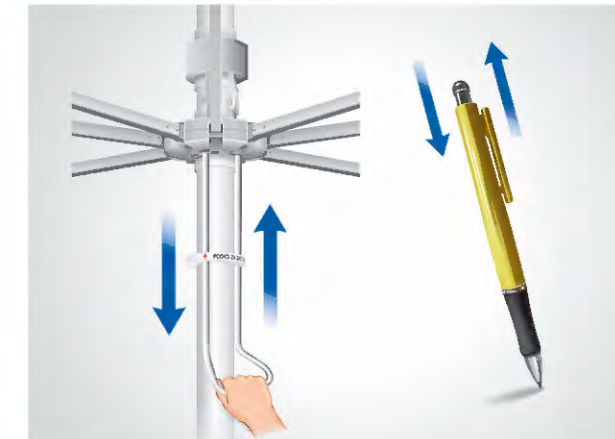

The print for itself will be processed in the **screen printing** technique. It is a technique that uses a woven mesh to support an ink-blocking screen to achieve the desired image. Each colour is applied using a different screen one at a time, which creates the final look when combined.

On selected items and small quantities, we offer our **digital printing** solutions. This method uses digital-based images which are printed directly to the fabric, using our high-performance inkjet printers. It allows for on-demand printing, shorter turnaround time and modifications of images for each impression.

EASY REPAIR

The click system of parasol repair that our engineers have carefully designed allows you to easily repair broken ribs on-site. You will not need extensive resources or personnel with special training to maintain our parasols. A tool available to you, such as a rubber mallet and simple instructions given to any of your personnel will be sufficient to replace a broken rib within one minute.

OPENING MECHANISM

Our automatic locking system (patent protected) ensures effortless handling. Handle mechanism operate similar to the retractable ballpoint pen. When the button end of the pen is pressed, the system moves from one position to the other. Its similar with our system: you simply push up to open or unlock to close parasol.

BECAUSE
IT FEELS GOOD

BEACH

A LIGHT AND
MOBILE SOLUTION

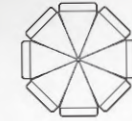

low cost commercial parasols

Small wire advertising parasol, offering by far the most cost-efficient way of advertising.

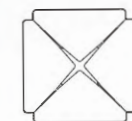

Frame is made of steel with main mast consisted of two-part pole 22/25 mm and ribs of 3,8 mm. Very easy opening system with handle and click system. Parasol cover is made of 160 g/m² polyester fabric, water-repellent as standard.

ADVANCE

CLASSIC AND TELESCOPE

ultimate solution for patios, gardens
and other commercial applications

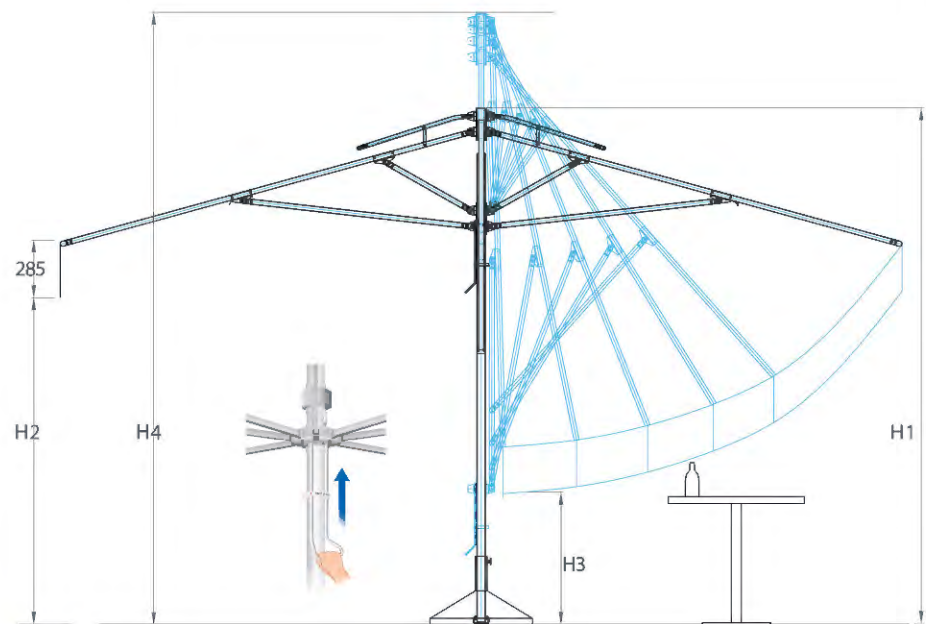

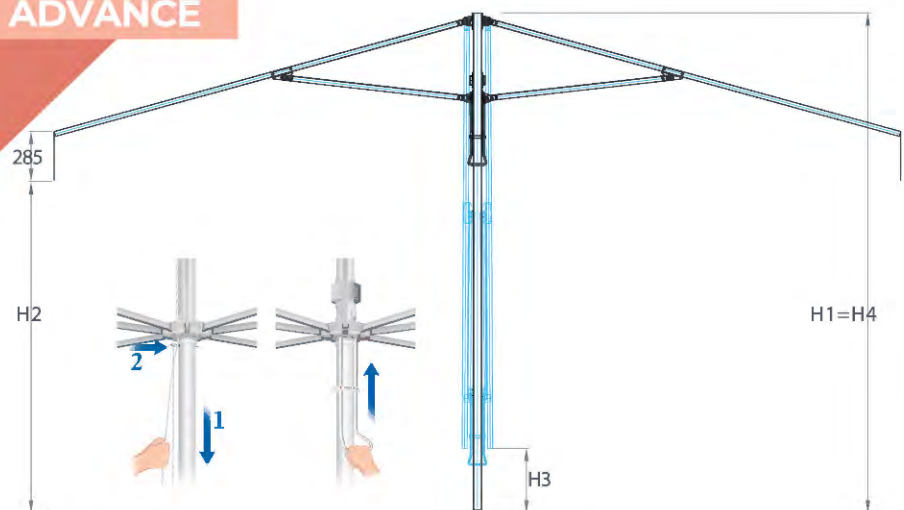

Advance Classic is large and reasonably-priced advertising media, with a light weight in relation to its size, and therefore also suitable in mobile catering and event planning. Frame is made of 100% non-recycled robust and durable aluminum. Joints and other plastic parts are made of strong and durable abs and polyamide, UV stabile. Cover is made of 160-300 g/m² 100% polyester fabric, with professional screen and digital printing options with highest UV protection and colours durability index.

Advance Telescope has all the advantages of the Classic model, plus the additional features: telescopic mast and sturdier frame. With use of telescopic system (additional inner tube) parasol is opened and closed over the table – no need to move tables and chairs.

PERMANENT SOLUTION

versatile, comfortable,
durable parasols

Centilever parasol are designed for professional as well as personal use. Their main characteristic is dislocated pillar, thanks to which the entire parasol gets a new esthetic touch, and greater usage of space under the parasol. The free space under the parasol can be fully optimized for placing tables and chairs on the terrace. Basic models are Single, Duo or Quad. The parasol base may be weighed down with concrete slabs or with in-ground sleeve base.

SIDE SHEETS

Turn your parasol into a pavilion or into a smoking zone by using our side sheets. They are made of high quality fabrics in a range of colours and several different designs.

When fitted, side sheets provide extra protection from the weather. Choose one of the designs of our side sheets, with or without doors and windows, to suit your particular needs.

RAIN GUTTERS

Link the square and rectangular parasols one to another using the rain gutters to cover a large area. Attaching the rain gutters will ensure that no water can penetrate between the parasols. In the seams on the longitudinal side of the gutters are inserted aluminum tubes for additional stabilization of the gutter and to prevent its deformation

PROTECTIVE COVER

When not in use, protect your parasol from elements, dust and birds. It comes in different lengths to fit any parasol. Standard colour is cool grey 10C, but any other PANTONE colour is available per request.
